

Systems Engineering - Team 38

Raluca Ioana Vacaru, Yee Chong Tan

Overview

These two weeks on the project have been centred around doing more research on java script in order to have better visualisation of the data and also setting up the database of the project.

Meetings

We haven't got any meeting scheduled with our client within these 2 weeks. However, we are looking to schedule our next meeting in the next two weeks. In the next meeting, we aim discuss our front end database with our client and also accommodate the needs of the other two team (team 39 and team 40).

Goals for the next two weeks

There are a few goals we want to achieve in the following weeks to keep things on track:

- ✚ Finish coding project overview page.
- ✚ Ensure the data visualisation using data from team 39 and team 40 is working properly and seek to improve from that.
- ✚ Improve the app based on the feedback we got from our client.

Individual section

Raluca Vacaru

In the past weeks, I have been researching on different JavaScript data visualisation libraries, trying to find one that suits our app the most to display the pie charts. I am also thinking of ways that we can use data visualisation in other parts of the application in order to make the information clearer to our users.

Yee Chong Tan

In the past weeks, I have been working on setting up a common database for the web app. Besides that, I have also been researching on the visualisation of data using JavaScript. I also worked on the user authentication page of the web app. Meanwhile, I am writing the biweekly report.
